

Amendments To Claims:

This listing of claims will replace all prior versions, and listings, of claims in the specification:

Listing of Claims:

Claims 1- 8 (Cancelled)

Claim 9 (New) An electrical connection cable strain relief device comprising:

a strain-relieving element disposed about a portion of at least one cable having at least one electrical lead extending out from said strain-relieving element;

at least one positioning pin disposed to extend from said strain-relieving element, said at least one position pin having a longitudinal axis parallel to a longitudinal axis for said electrical lead extending out from said strain-relieving element, and said at least one positioning pin having a non-circular cross section; and

a contact partner including at least one hole disposed through a portion of said contact partner;

wherein said at least one positioning pin is disposed to be compression fit in said at least one hole so that at least one electrical conductor disposed on said contact partner can be attached to said at least one electrical lead for electrical connection.

Claim 10 (New) The electrical connection cable strain relief device according to claim 9, wherein said strain-relieving element is made of plastic and is extension-coated on said at least one cable.

Claim 11 (New) The electrical connection cable strain relief device according to claim 9, wherein said strain-relieving element is cemented to said contact partner.

Claim 12 (New) The electrical connection cable strain relief device according to claim 9, wherein said at least one positioning pin has an angular cross section.

Claim 13 (New) The electrical connection cable strain relief device according to claim 9, wherein said at least one positioning pin has a triangular cross section.

Claim 14. (New) The electrical connection cable strain relief device according to claim 9, further comprising;

said at least one positioning pin including a pin body and at least one pin clip disposed to project from said pin body.

Claim 15. (New) The electrical connection cable strain relief device according to claim 14, wherein said at least one pin clip has a triangular cross section.

Claim 16. (New) The electrical connection cable strain relief device according to claim 9, wherein said contact partner is a circuit board.

Claim 17. (New) The electrical connection cable strain relief device according to claim 9, further comprising an arm disposed to extend from said strain-relieving element, said arm including recesses, each of said recesses disposed and sized to retain a cable.

Claim 18. (New) The electrical connection cable strain relief device according to claim 9, further comprising an arm disposed to extend from said strain-relieving element, said arm including a second positioning pin having a non-circular cross section and further having a longitudinal axis parallel to said longitudinal axis for said electrical lead extending out from said strain-relieving element;

wherein said second positioning pin is disposed to be compression fit in a second hole disposed through a portion of said contact partner.

Claim 19. (New) The electrical connection cable strain relief device according to claim 9, wherein said strain-relieving element is disposed about said at least one cable to have a longitudinal axis of said cable parallel to a longitudinal axis of said at least one electrical lead extending out from said strain-relieving element.
